

ATTENTION: We are not a land fill operation, 100% of the material that comes through our gate is recycled. Our prices (Quotes) are based on clean loads only. Contaminated loads will be charged the contaminated gate rate and we reserve the right to reject a load in its entirety. You are responsible for all hidden contamination after the load is dumped. Loads must be separated prior to arriving (Example: no concrete mixed with wood waste, dirt mixed with concrete, wood waste mixed with pressure treated wood, trash/papers, metals, plastics, etc.) Another example of a contaminated load would be a load of Concrete exceeding 24" x 24" or rebar extruding over 6" in length, or "stumps" and "rounds" exceeding 36" in any direction. Our operation is closely monitored by the county and we can be heavily fined for accepting solid waste (contaminated loads). Your cooperation will be appreciated.
